Alegeus Hiring Team
Alegeus Technologies

Dear Hiring Team,

I am applying for the Software Engineer II position at Alegeus. The opportunity to build enterprise applications at the intersection of fintech and healthtech aligns directly with my experience building production systems for insurance data platforms and AI-enabled workflows.

At the American Association of Insurance Services, I engineered automated ETL pipelines using Python, PySpark, and AWS Glue that process 20+ TB of production insurance transaction data across 700+ member companies for executive billing reporting. I led data profiling and schema migration across 160+ tables in MySQL, Oracle, and Impala, standardizing disparate legacy records into 25 unified master-data domains, and modernized 160+ legacy Pentaho jobs into serverless AWS Glue workflows with partitioned S3 data lakes guaranteeing 24-hour SLA data freshness. This work required deep SQL expertise, database performance optimization at scale, and close collaboration with Agile teams to deliver reliable financial data systems.

In my current role at Actual Reality Technologies, I architected a production client portal using Next.js 15, React 19, and Firebase with multi-tenant session isolation, automated ticket triage via Plane API two-way synchronization, and real-time client retainer tracking. I also built an automated evaluation pipeline with Node.js and Playwright validating multi-turn reasoning across 41+ regression test suites with CI/CD gates, and integrated a LiteLLM AI gateway with multi-tier routing, guardrails, and Langfuse tracing. These experiences have given me hands-on familiarity with REST APIs, Pub/Sub messaging patterns, secure coding practices, and production operations readiness.

Alegeus's mission to shape the future of fintech and healthtech resonates with my background in insurance data platforms and healthcare workflow software. I would welcome the opportunity to discuss how my experience building scalable, secure, data-driven systems can contribute to the Alegeus product line.

Sincerely,

Aryan Miriyala
